Albums & Folders News

Drop by to see our *new display* of albums from DF, Leather Album Designs and Renaissance Albums. Yes, really. We actually have a display! Also, don't forget most studio samples are available at a 15% discount.

Laminate Samples

We now have sample packages of our new and improved cold laminates. Just give us a call and we'll be sure to get them out to you ASAP. For information on our laminator see our webpage under the "Albums " section or come by the store for a demo.

Film News

Efke 25 4x5 sheet film is in! This is currently the only 25 iso film we stock in 4x5. **Efke** film is produced in Croatia and the emulsions are similar to those produced by the German Adox company in the mid 20th century. **Efke's** unusually high silver content produces superb tonality and grey scale and provides superior results when using traditional tungsten illumination. **Efke 25** is ortho-panchromatic, resulting in reds appearing darker and greens appearing lighter than they do with conventional B&W panchromatic film. So, if you are looking for a film that replicates the look of those used during the early to mid 1900s or in the market for something a little unique, try Efke.

News from the back !

For those who have been waiting, YOU already know! For those of you who haven't, it has finally been announced! **Nikon's** next generation **Professional Digital SLR** for photojournalism, action and sports. The new **D2H** incorporates an amazing combination of speed, resolution, handling and faster work flow for total image quality and performance.

As for specs ? Check this out: **8 fps** for up to **40** consecutive **JPEG** or **25 RAW (NEF)** full resolution (**2,464 x 1,632 pixel**) images. The **D2H** also has a very short **37ms** shutter time lag. **Instant power up** means the **D2H** is ready to go when you are. Nikon's exclusive new **4.1 mega pixels** CCD improves on power consumption and minimizes dark noise all while increasing speed and image quality. This **new sensor (CCD)** is also built to read **2 channels of data** from each **pixel** at once for maximum speed in image reproduction.

Another Nikon innovation in the **D2H** is their new **Multi-Cam 2000 AF** sensor module, which ensures quick response and tack sharp focus in all shooting conditions. This new AF system features **11 sensors**, 9 of which **are cross type sensors** that pretty much cover the **majority of the image area**. And finally, the **NEW** optional **wireless transmitter (WT-1)** interfaces directly with **IEEE 802.11b** compatible access points to realize wireless image & sound **data to FTP servers** and marks a major advance in freeing the photographer's movement and in his/her ability to deliver timely photos promptly.
